

FLEXIROAM

Job Description: Software Engineer Backend

We are Flexiroam. We value honesty, transparency and we hold ourselves to the highest standard of excellence. We recognize that the small things count, and they all add up to make a difference. Our customers get our full attention, and we keep pushing until we deliver the best solution possible.

By joining our team, you are joining our mission to building a world class technology company that connects people and machines everywhere. Surround yourself with highly motivated and passionate people who have an insatiable appetite for global expansion and personal development.

Responsibility: -

We are looking for someone to work in a small development team to create, modify and maintain software projects like Web Applications, APIs. Plus, to be a team player in defining the architecture of the application for scalability and reliability.

- Design and develop performance - optimised & scalable PHP applications/RESTful with MySQL databases.
- Work with various departments to gather requirements for new features/systems and evaluate the feasibility of development.
- Perform tests, integration, and maintenance of applications.
- Perform revision, repair, or expansion of existing applications to increase operating efficiency or adapt to new requirements.
- Document projects to ensure continuity and clarity in project functions and their source code.
- Extract system data and create reports to support the organization's strategic planning.
- Involve in application architecture design and implementation which consider scalability and reliability.
- Able to design the application architecture and data flow. (Ex. Wireframe, Use-Case, UML, ERD, Flow Chart)

Requirement: -

- Minimum **3 years of experience** as Backend Developer
- Experience with programming languages like PHP (Laravel, CodeIgniter), NodeJS, Python
- Experience with Amazon Web Services (AWS)
- Understand some front-end languages like UI/UX Framework (Bootstrap/Material), HTML, JavaScript (jQuery/Angular/ReactJS) etc.
- Experience in API integration
- Passionate in designing and creating software and eager to grow in this domain.
- Strong problem-solving skills & self-initiator to solve any issue encountered by the team or self.
- Highly analytical, with strong attention to detail.
- Responsible and able to work independently.
- Self-motivated thrives on challenges and is interested in learning new technologies.
