

FLEXIROAM

Frontend JavaScript Engineer (Mid/Senior)

About Flexiroam:

We empower our product squads to solve hard problems – customer problems and business problems – in ways that our customers love, yet work for our business. Our product squads are cross-functional and durable, generally composed of a product manager, a product designer, and several engineers.

We staff our product squads with the skills necessary to come up with effective solutions that are valuable (our customers choose to buy or use), viable (the solution works within the many constraints of the business), usable (the user can figure out how to use) and feasible (our engineers have the skills and technology to implement).

About the role:

As a JavaScript Engineer on a product squad, you are responsible for developing a user-friendly, advanced web interface for our products. You will solve challenging engineering problems and you will have freedom and ownership over your products code end to end. The JavaScript developer's responsibilities include optimizing applications, ensuring UI/UX feasibility and modern front-end applications architecture.

What you'll be doing:

- Implement beautiful user interfaces with innovative UI elements
- Design and build scalable, reliable and usable UIs that can handle large volumes of user traffic
- Ensure the feasibility of UI/UX designs
- Focus on high-end performance web UIs for mobile and tablet browsers
- Deliver clean, testable and maintainable code to ensure functionality as well as the quality of the product
- Collaborate deeply with designers, product managers and other engineers
- Mentor and train other team members on design and coding techniques
- Own the problem and make your own decisions - take responsibility end to end
- Focus on solving real user problems, including talking to our customers about their needs

Necessary Qualifications:

- Experience in building web applications in Javascript, TypeScript, or ES6
- Experience with at least one of the following frameworks (eg. AngularJS, React, Vue)
- Expertise in modern web app building and testing frameworks (eg. Webpack, Jest, Karma, Cypress)
- Experience in debugging and profiling applications, while simultaneously improving their efficiency, scalability and stability
- Familiar with CI/CD (eg. GitLab, Jenkins)

Diverse perspectives:

We know that innovation thrives on product teams where diverse points of view come together to solve hard problems in ways that are just now possible. As such, we explicitly seek people that bring diverse life experiences, diverse educational backgrounds, diverse cultures, and diverse work experiences. Please be prepared to share with us how your perspective will bring something unique and valuable to our product teams.
